Year - 2021

This is to certify that the project work “website design on Covid-19 tracker” is a bonafide work carried out by Prodeepta Bera , a student of B.Sc. CMSA, 6th Semester from Sammilani Mahavidyalaya and registered under Calcutta University (Reg. no 444-1111-1576-17 and Roll No. 183444-21-0166) , in partial fulfillment of the degree of Bachelor of Science on Computer Science (Hons.).

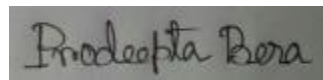

Prof. Swagata Saha Sau
Head of the Department

Acknowledgement

I would like to express my profound sense of gratitude towards our respected H.O.D madam, and all the teachers of the department of Computer Science, Sammilani Mahavidyalaya for their valuable guidance, support and encouragement during the course of my semester VI project: website design on Covid-19 tracker.

I am deeply indebted to our Department of Computer Science, Sammilani Mahavidyalaya for giving this opportunity to work on this project and for their kind help and support to develop an understanding of the subject and making clear knowledge by providing necessary insight. Their readiness for consultations at all times, their educative comments, their concern, concrete support and assistance even with practical things have been invaluable.

Prodeepta Bera

Roll No.: 183444-21-0166

CMSA-6th semester, 2021

Abstract

On March 11, 2020 the World Health Organization has declared the outbreak of the novel Coronavirus (SARS-CoV-2) also known as Covid-19 as pandemic across the world. With its alarming surge of affected cases throughout the world, lockdown, and awareness (social distancing, use of masks etc.) among people are found to be the only means for restricting the community transmission. In a densely populated, developing country like India, where internet is available to almost every person spread of wrong information can be very easy. This paper mainly focuses on delivering the right information about Corona virus spread in India as well as in the World on a webpage accessible from any device(Smartphone, Laptop, Desktop).This includes daily new covid cases, deaths, recovery, covid symptoms, covid precautions, covid care. It uses API's from government or healthcare organization for gathering data. Therefore, this project can be used as a tool for creating further social awareness about the arising need of precautionary measures to be taken by the people of India.

Finally, the project was concluded with the scope for further work which could be done to achieve even better results.

1. Introduction

1.1 Domain Description

This is a webpage based project developed with HTML5, CSS3, Bootstrap 4.6, Javascript, PHP & MySQL. It is light, easily accessible and can run on all major browsers and on any device, be it Laptop, Desktop, Tablet or Smartphone. Unlike an application, it doesn't occupy any memory of the device.

For these reasons it can be available to a large number of people.

1.2 Motivation

The unprecedented spread of COVID-19 has the world scrambling to navigate a new normal. The World Health Organization (WHO) has underscored the importance of identifying COVID-19 cases and isolating them before they spread. Testing and tracing is vital to this effort, and all individuals in contact with an infected individual must be identified to mitigate further spread of the virus. Web application technology offers a powerful solution to facilitate the collection of data about user movements and points of contact. To defeat COVID-19 there must be a robust and effective track and trace app that can reliably provide the data needed to stop the spread.

1.3 Scope of work

Covitracker tracks the Covid-19 (SARS-CoV-2) cases, showing the data analysis on recovered cases, deaths, active cases in India and all other countries in the world. We also included a new program called “Covi-care” to help people, suffering from corona virus and the elderly persons with the help of local volunteers. In this project we didn’t included the vaccination center search option and doctor’s consultation. But in future these features will also be included.

2. Review of Related Work

Currently there exists many websites like this project. “[1] COVID-19 Tracker” By - Abhijit Show, Sayan Guha Roy, Sourav Ghosh, published on 6 July 2020 and “[2] Development of An Android Application for Viewing Covid-19 Containment Zones and Monitoring Violators Who are Trespassing into It Using Firebase and Geofencing” By - Ranajoy Mallik,corresponding author Amlan Protim Hazarika, Sudarshana Ghosh Dastidar, Dilip Sing, and Rajib Bandyopadhyay, published on 1 July 2020.

These works are related to my work, but in their work they only focused on covid positive number tracking [1] and marking the containment zones [2]. If they provide information about daily covid cases, daily deaths and recovery numbers then that information would make people think about the situation we are in. Many other applications do not provides proper data that a normal user needs.

3. Methodology

3.1 Problem Statement

- In this work all covid related data are shown individually e.g. state wise (for India) and world data including all countries data.
- In this work user can avail covid care option to get help with medical services.

3.2 SRS Document

3.2.1 Category

This is a website built using HTML5, CSS3, Bootstrap 4.6, scripting languages (PHP, Javascript) and MySQL.

It is light, easily accessible and can run on all major browsers and on any device, be it Laptop, Desktop, Tablet or Smartphone. Unlike an application, it doesn't occupy any memory of the device.

Since it is a website it doesn't matter what OS your device has it can run in all of them.

3.2.2 Purpose

The purpose of the software is to give many features in a single one. This helps the user to provide covid related details in their hand.

3.2.3 Scope

Covitracker tracks the Covid-19 (SARS-CoV-2) cases, showing the data analysis on recovered cases, deaths, active cases in India and all other countries in the world. We also included a new program called “Covi-care” to help people, suffering from corona virus and the elderly persons with the help of local volunteers. In this project we didn’t included the vaccination center search option, symptom tracker, doctor’s consultation, email notification. But in future these features will also be included.

3.2.4 Software Tools

In this project we have used HTML5 (Hyper Text Markup Language version 5), CSS3 (Cascading Style Sheet version 3), Bootstrap (CSS library) version 4.6, Javascript (Scripting Language), PHP (Scripting Language), MySQL (database), Sublime text editor (version 4), XAMPP Server, Brave Borwser.

3.2.5 Development

To use this website we need Internet connection, a computer device or smart phone.

3.2.6 Hardware Specification

To develop this software, I used these following hardware:

Ram: 4gb

Processor: Intel CORE Duo.

Hard Disk: 256gb

OS: Windows 7 Home Premium.

3.3 Method Description

Method Covid Status

Step 1: Read choice

Step 2: If choice = India then

Call Indian Data

Else if choice = World then

Call World Data

Step 3: Display confirmed Cases

Step 4: Display Active Cases

Step 5: Display Recovered Cases

Step 6: Display Death Cases

Step 7: Display Last Updated Time

Method State Data

Step 1: Display all states of India

Step 2: Display confirmed Cases

Step 3: Display Active Cases

Step 4: Display Recovered Cases

Step 5: Display Death Cases

Step 6: Display Last Updated Time

Method World Data

Step 1: Display confirmed Cases (Country wise)

Step 2: Display Active Cases

Step 3: Display Recovered Cases

Step 4: Display Death Cases

Step 5: Display Last Updated Time

Step 6: Display

Method Covicare

Step 1: Enter your name

Step 2: Enter your email

Step 3: Enter your phone number

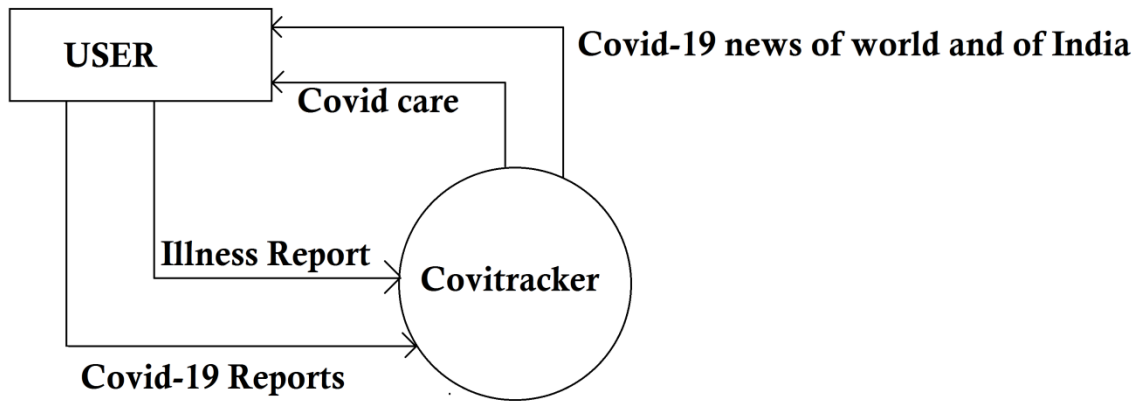

Step 4: Enter your address

Step 5: Enter your Symptoms

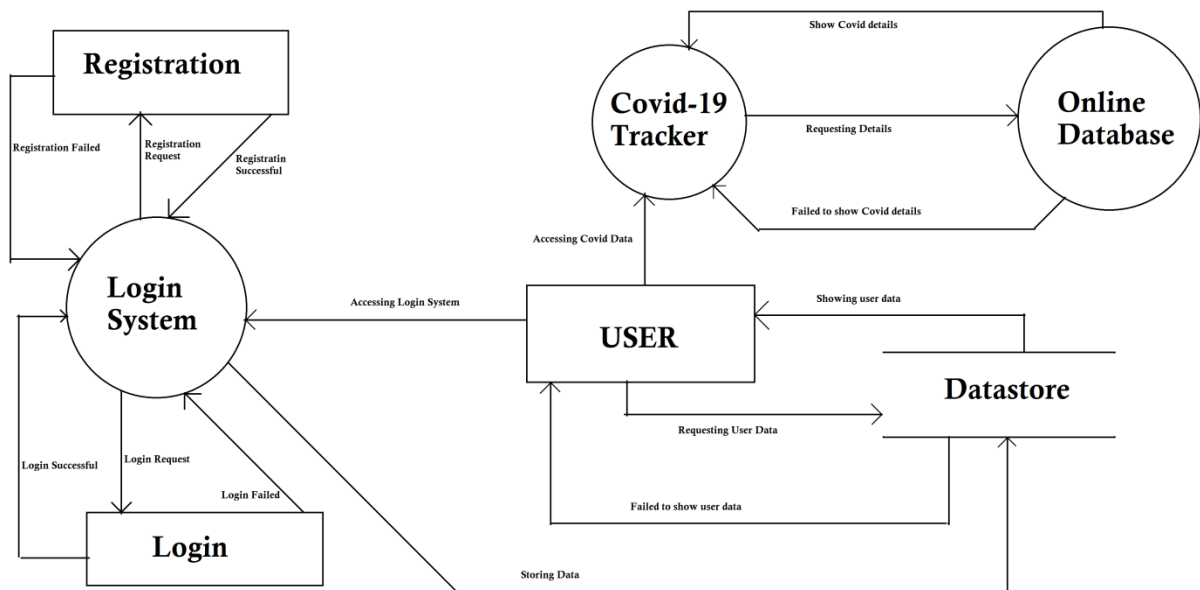

Step 6: Describe your illness

Step 7: Submit

3.4 Design Description

Level – 0 DFD

Level – 1 DFD

<h2> What is Covid-19 (Corona Virus) ? </h2>

<p>Coronaviruses are a group of related RNA viruses that cause diseases in mammals and birds. In humans and birds, they cause respiratory tract infections that can range from mild to lethal. Mild illnesses in humans include some cases of the common cold (which is also caused by other viruses, predominantly rhinoviruses), while more lethal varieties can cause SARS, MERS, and COVID-19.</p>

<p> In cows and pigs they cause diarrhea, while in mice they cause hepatitis and encephalomyelitis. There are many different kinds, and some cause disease. A coronavirus identified in 2019, SARS-CoV-2, has caused a pandemic of respiratory illness, called COVID-19.</p>

5.2 Discussion

In this website we can easily use any feature by selecting any option of the navigation bar. The covid-19 tracker easily shows data of the whole India as well as state wise and the world as whole and country wise.

User can ask for covid care very easily just by filing up the given form and submitting it.

User can also create their account.

They can easily contact us with the given contact information.

6. Conclusion

In this project I made a website which provides Covid-19 related Information along with volunteer health care services and other helps.

Covid tracker tracks the Covid-19 (SARS-CoV-2) cases, showing the data analysis on recovered cases, deaths, active cases in India and all other countries in the world. We also included a new program called “Covi-care” to help people, suffering from corona virus and the elderly persons with the help of local volunteers. In this project we didn’t included the vaccination center search option and doctor’s

consultation, Covid symptom analyzer, email support. But in future these features will also be included.
